Stage-D examples, raw 01, D11FWT (old population). Accepted at FDP_c 1 %: score cut 22.0 (normalised winner score).
'Low abundance' = lowest DIA-NN quantity tertile: log10 Precursor.Quantity < 5.57 (about 372194); high tertile > 6.39.
All DIA-NN 1 % precursors in this run: median log10 quantity 5.72. D score interquartile range -0.4..12.3.
Per page: (top left) 6 library-fragment XICs from the .xipm export, (top right) MS1 M+0..M+3, (bottom) apex MS2 scan mirrored with the library.
Black line: our winning apex. Red dashed line and band: DIA-NN RT and RT.Start..RT.Stop.
